

We want our products, services and production to be part of a sustainable society. We are committed to:

- Complying with all applicable laws and regulations in all countries we are present.
- Designing products to reduce their adverse environmental impact in production, transport, use and disposal. This includes designing them for a long life.
- Reducing resource consumption, waste and pollution in our operations. This includes not using primary material when producing our products and not using fossil fuel or electricity based on fossil fuel, whenever possible.
- Encourage and support our suppliers and subcontractors to adopt the same environmental principles as Roca.
- Giving appropriate weight to this environmental policy when making future planning and investment decisions.
- Setting targets and objectives, within the scope of the environmental management system, to achieve continual improvement and a sustainable development.

This Policy applies to all Roca entities and employees.
